Acetylated distarch adipate is a modified starch. It is obtained by esterification of food starch with acetic anhydride and esterification/cross-linking with adipic anhydride, in accordance with good manufacturing practice. Acetylation results in substitution of hydroxyl groups with acetyl esters. In cases of cross -linking, where adipic anhydride, connects two chains, the structure can be represented by: Starch-O-R-O-Starch, where R = CO-(CH2)4-CO and Starch refers to the linear and/or ...
