Animal Cognition: Evolution, Behavior and Cognition by ...

Evolution of cognition is the idea that life on earth has gone from organisms with little to no cognitive function to a greatly varying display of cognitive function that we see in organisms today. Animal cognition is largely studied by observing behavior, which makes studying extinct species difficult. The definition of cognition varies by discipline; psychologists tend define cognition by human behaviors, while ethologists have widely varying definitions. Ethological definitions of cognition r

Evolution of cognition - Wikipedia

Cognitive scientists and biologists want to understand how the minds and brains of animals work, how they evolved, and what they can tell us about the human mind and brain. Animal science students can take courses in general animal behavior, animal cognition, communication, and evolution. Students also can investigate anatomy, physiology, biochemistry, genetics, ecology, and other related fields.

Cognitive processes such as perception, learning, memory and decision making play an important role in mate choice, foraging and many other behaviours. In this review, I summarize a few key ideas about animal cognition developed in a recent book (Shettleworth 1998, Cognition, Evolution and Behaviour) and briefly review some areas in which interdisciplinary research on animal cognition is currently proving especially productive.

Animal cognition and animal behaviour - ScienceDirect

Animal cognition research examines the processes used to generate adaptive or flexible behavior in animal species. Much of the work on animal cognition is more appropriately described by the term comparative cognition, because the processes and capacities underlying behavior are compared between species (Shettleworth 2010).

Animal Cognition (Stanford Encyclopedia of Philosophy)

With comprehensive coverage of this field, key concepts will be explored. These include social cognition, prey and predator detection, habitat selection, mating and parenting, learning and perception. Attention is also given to animal-human co-evolution and interaction, as well as metacognition and consciousness.
