"Atoms for Peace" was the title of a speech delivered by U.S. President Dwight D. Eisenhower to the UN General Assembly in New York City on December 8, 1953. I feel impelled to speak today in a language that in a sense is new - one which I, who have spent so much of my life in the military profession, would have preferred never to use. That new language is the language of atomic warfare. The United States then

Atoms for peace : a future after fifty years?
- JH Libraries

December 9, 2003. When President Eisenhower
put forward his "Atoms for Peace" proposal 50
years ago, he presented a surprisingly
optimistic worldview, characterized by the
spread of peaceful nuclear technology, a
means to control the arms race, and a way to
halt the spread of nuclear weapons.

"Atoms for Peace: A Future After Fifty Years?"

On December 8, 1953, President Dwight Eisenhower proposed in a speech to the United Nations that nuclear nonproliferation be promoted by offering peaceful nuclear technology to countries that would renounce nuclear weapons. Today the value of that basic trade-off—atoms for peace—is in question, along with the institutions that embody it.

Publisher description

Thirty years ago, President Eisenhower's Atoms for Peace proposal to the United Nations provided the basis for development of nuclear cooperation, trade, and nonproliferation policy in the noncommunist world. Ever since its inception, however, the

policy has sparked widespread debate, and it remains controversial today. Exploring the past, present, and future significance of Atoms for Peace, the contributors to this volume analyze the future role of the United States in international affairs, the nature of controls over nuclear cooperation and trade, the scope and limitations of international cooperation in nuclear energy and nonproliferation matters, and the prospects for multinational and international institutional measures to achieve these ends.

In his "Atoms for Peace" speech of 1953,

President Dwight David Eisenhower captured the tensions—and the ironies—of the atomic age. While nuclear devastation threatened all nations, Eisenhower believed only nuclear preparedness offered protection; while nuclear weapons loomed as the ultimate war cloud, nuclear power offered progress and hope. In this thought-provoking consideration of Eisenhower's speech and others leading up to it, Ira Chernus views the "Atoms for Peace" speech, presented to the General Assembly of the United Nations, not merely as a legitimation of American foreign policy but as itself an act of policy. Indeed, he frames

the policy in a new interpretation of Eisenhower's broad discursive goal, which he calls "apocalypse management," a plan to allow the United States to manage threats and crises around the world. Chernus sheds new light on the internal consistency of Eisenhower's thought, which many observers have found inconsistent, as well as on the ways in which the president's rhetoric backed him into a policy corner he had not intended to occupy. Chernus also reviews the domestic impact of the speech through a detailed examination of media interpretations in the United States. This tightly reasoned, clearly

written study offers a new understanding of the evolution of cold war nuclear policy, the power of presidential rhetoric, and the political understanding of America's "man of peace," Dwight David Eisenhower. The full text of Eisenhower's speech is presented in the text. Those interested in American foreign policy will find it compelling reading; scholars and students will find it challenging and rewarding analysis.

Turkey, with a robust modern economy and growing energy needs, is pursuing a switch to nuclear power. But that shift is occurring in an environment fraught with security challenges: Turkey borders Iraq, Syria, and Iran—all states with nuclear or WMD ambitions or capabilities. As a NATO member, Turkey also hosts U.S. nuclear bombs on its territory, although some question the durability of this relationship. This dynamic has naturally led to speculation that Turkish leaders might someday consider moving beyond

a civilian course to develop nuclear weapons. Yet there has been remarkably little informed analysis and debate on Turkey's nuclear future, either within the country or in broader international society. This volume explores the current status and trajectory of Turkey's nuclear program, adding historical perspective, analytical rigor, and strategic insight.

At the same time, the costs of alternatives such as photovoltaics and wind power have significantly decreased.
