DX (Nikon) / EF-S (Canon) – These lenses were specifically created for camera bodies that are smaller than full-frame. APS-C size sensors have a crop factor. These lenses give you a focal length, taking in the smaller sensor into account. These are smaller and lighter to their siblings, but can ' t be used on full frame cameras.

Camera Lens Guide (Parts, Functions and Types Explained)

All Canon lenses can use a range of aperture openings, but the largest opening the lens offers is the most important measurement. F-stop: The f-stop measurement on the lens is the numeric representation of the aperture setting. A low f-stop number equals a large aperture, and a high f-stop number equals a small aperture.
