## Cast Iron And Ductile Iron

The key difference between ductile iron and cast iron is that we use ductile iron for water pipes due to its durability while we use cast iron usually for engineering and construction structures because of its stability. Ductile iron and cast iron are

Iron | Compare ...

What types of iron are cast in the foundry?

**Ductile Cast Iron:** This type of iron was developed in 1948 and has become a very important alloy for ferrous foundries.

**Malleable Cast Iron:** Before the invention of ductile iron, this alloy was more popular. It is a white cast iron that is...

Ductile iron - Wikipedia

Difference Between Ductile Iron and Cast Iron

1. Ductile iron can be bent without breaking.
2. Cast iron is brittle and it breaks when bent.
3. While ductile iron is flexible, cast iron is not.
4. As ductile iron can be bent, it can be made into different shapes and forms. One cannot make out ...

## Differences and ...

Ductile iron castings are very strong compared to regular cast iron (gray iron). The tensile strength of cast iron is 20,000 – 60,000 psi while ductile iron starts at 60,000 psi and can go to 120,000 psi.
