5-Steps, Barron's and the other review books are great resources for the end of the year, but the Tamm's Textbook Tools line accompanies kids all year long. They are filled with assignments that follow the regular text as they go through all 14 chapters and the appendix of Ciccarelli & White's 4th AP edition of Psychology*, published by Pearson. Teachers can copy vocab and chapter activities at will, and they are perfect if there is a substitute. When publishers started putting the majority of their content online, it opened a niche for traditional paper assignments, which this workbook fills. It doesn't matter whether the textbook is written in ink or electrons, students still need to physically write and keep a notebook for themselves. Portfolios still matter. This independently made series challenges students to define the concepts, apply them, and give examples. Easily collectible, this item may also be used as a student consumable. Find TTT on FB.

How do we bring the law into line with people's psychological experience? How can psychoanalysis help us understand irrational actions and bad choices? Our legal system relies on the idea that people act reasonably and of their own free will, yet some still commit crimes with a high likelihood of being caught, sign obviously one-sided contracts, or violate their own moral codes--behavior many would call fundamentally irrational. Anne Dailey shows that a psychoanalytic perspective grounded in solid clinical work can bring the law into line with the reality of psychological experience. Approaching contemporary legal debates with fresh insights, this original and powerful critique sheds new light on issues of overriding social importance, including false confessions, sexual consent, threats of violence, and criminal responsibility. By challenging basic legal assumptions with a nuanced and humane perspective, Dailey shows how psychoanalysis can further our legal system's highest ideals of individual fairness and systemic justice.

This book places the main actors in environmental microbiology, namely the microorganisms, on center stage. Using the modern approach of 16S ribosomal RNA, the book looks at the taxonomy of marine and freshwater bacteria, fungi, protozoa, algae, viruses, and the smaller aquatic animals such as nematodes and rotifers, as well as at the study of unculturable aquatic microorganisms (metagenomics). The peculiarities of water as an environment for microbial growth, and the influence of aquatic microorganisms on global climate and global recycling of nitrogen and sulphur are also examined. The pollution of water is explored in the context of self-purification of natural waters. Modern municipal water purification and disease transmission through water are discussed. Alternative methods for solid waste disposal are related to the economic capability of a society. Viruses are given special attention. By focusing on the basics, this primer will appeal across a wide range of disciplines.

and subtleties clinicians must know in the application of this technique, now firmly established as a primary tool for diagnosing and managing thyroid disease. Developed by renowned experts in thyroid and parathyroid disease, the book covers not only thyroid and parathyroid disease, but also imaging of the salivary glands and other non-endocrine lesions of the neck. In this edition, the authors expand the chapters on both surgical and non-surgical management. Given the increased use of molecular markers in thyroid evaluation, an excellent chapter addresses this topic. Finally, as more endocrinologists and surgeons perform ultrasounds in their office practices, a chapter on authoring ultrasound reports is now included. Combining the collective wisdom of specialists who treat patients with thyroid nodules, thyroid cancer and parathyroid disease, Handbook of Thyroid and Parathyroid Ultrasound and Ultrasound-Guided FNA, 4th Edition is an invaluable resource and will continue serving as the “ go to ” guide for surgeons, endocrinologists, fellows and residents. Foreword by Peter A. Singer, MD, Chief of Clinical Endocrinology and Director, Thyroid Diagnostic Center, Keck School of Medicine of USC, Los Angeles, CA.
