Codeigniter User Guide Redirect

The default value is 302 which is a temporary redirect and is recommended in most cases: \$routes->add('users/profile', 'Users::profile', ['as' => 'profile']); // Redirect to a named route \$routes->addRedirect('users/about', 'profile'); // Redirect to a URI \$routes->addRedirect('users/about', 'users/profile');

URI Routing - CodeIgniter 4.0.4 documentation

To IIS users: if you hide the Server HTTP header, the auto method won't detect IIS, in that case it is advised you explicitly use the refresh method. Note When the location method is used, an HTTP status code of 303 will automatically be selected when the page is currently accessed via POST and HTTP/1.1 is used.

URL Helper - CodeIgniter 3.1.11 documentation

echo base_url(); This function returns the same thing as site_url (), without the indexPage being appended. Also like site_url (), you can supply segments as a string or an array. Here is a string example: echo base_url('blog/post/123'); The above example would return something like: http://example.com/blog/post/123.

URL Helper - CodeIgniter 4.0.4 documentation

CodeIgniter User Guide. URL Helper. The URL Helper file contains functions that assist in working with URLs.

URL Helper : CodeIgniter User Guide

As a first step, open your app/Config/App.php file and look for the URI Protocol information. It will recommend that you try a couple of alternate settings. If it still doesn't work after you've tried this you'll need to force CodeIgniter to add a question mark to your URLs. To do this open your app/Config/App.php file and change this:
