A child wanders too far into the Knysna Forest ... he never returns. Nine years later government officials working on a census find a white child living with a Coloured family in the mountains beyond the forest. They take him away from the stricken Fiela, who has brought him up as her son, and give him back to his 'original' family. Stunned and helpless, Benjamin waits for Fiela to reclaim him. But, powerless against authority, Fiela never comes. Benjamin has to grow up before he can go in search of the truth ...

In the spring of 1999, in the beautiful hills of the KwaZulu-Natal midlands, a young white farmer was shot dead on the dirt road running from his father's farmhouse to his irrigation fields. The murder was the work of assassins rather than robbers; a single shot behind the ear, nothing but his gun stolen, no forensic evidence like cartridges or fingerprints left at the scene. Journalist Jonny Steinberg travelled to the midlands to investigate. Local black workers said the young white man had it coming. The dead man's father said the machinery of a political conspiracy had been set into motion, that he and his neighbours were being pushed off their land. Initially thinking that he was to write about an event in the recent past, Steinberg found that much of the story lay in the future. He had stumbled upon a festering frontier battle, the combatants groping hungrily for the whispers and lies that drift in from the other side. Right from the beginning, it was clear that the young white man would not be the only one to die on that frontier. Sifting though the betrayals and the poisoned memories of a century-long relationship between black and white, Steinberg takes us to a part of post-apartheid South Africa we fear to contemplate.

A headspinning thriller from crime writer Deon Meyer: the story of an ex-cop who has seven days to solve a seemingly unsolvable crime -- the answer to which lies in his own dark past. When Johannes Jacobus Smit, an antiques dealer, is found burned with a blowtorch and killed execution-style with a single shot to the back of the head, former cop Zatopek "Zed" van Heerden is called in to investigate the unusual circumstances of the murder. Zed is still obsessed with the betrayals of his own past but must fill in the blanks of this victim's life. Who tortured and killed Smit, and who was Smit in the first place? Not the man whose papers he carries, that much is certain. Zed can never be sure of the loyalties of the people with whom he is dealing -- his own past reputation ensures that -- and he soon finds himself uncovering secrets that the security services of many countries would like left alone. "Exciting...A terrific ride on almost every level."-Chicago Tribune

When word goes round that Old Foot is on the rampage, Saul is propelled towards a terrible confrontation that will change his future for ever.

STEMI Assistant is a condensed 40 page reference manual for health care practitioners who care for patients experiencing acute ST Segment Elevation Myocardial Infarction (STEMI). STEMI Assistant presents the latest evidence-based practices described in the American College of Cardiology (ACC) / American Heart Association (AHA) 2013 STEMI Guidelines, AHA/ACC 2014 Non-ST Elevation (NSTEMI)-ACS Guidelines and evidence based practices described in 19 additional recent scientific journal articles. STEMI Assistant is designed to serve as both a classroom textbook and an emergency bedside reference. It's formatted in a sequential, easy to follow order starting with basic definitions of typical and atypical symptoms of Acute Coronary Syndrome (ACS), the latest AHA/ACC/Heart Rhythm Society guidelines for obtaining 12 and 18 Lead ECGs, accurate identification of pre-infarction and STEMI ECG patterns and the identification of STEMI when bundle branch blocks are present. Model protocols for hospital and pre-hospital practitioners describe the latest evidence based practices for the management of patients with acute chest pain, NSTEMI-ACS, and STEMI in PCI capable and non-PCI capable scenarios. A generic Emergency Department Physician's STEMI order set reflects the latest AHA/ACC practices for the treatment of STEMI in the ER and satisfies multiple Key Items listed in the Society of Cardiovascular Patient Care's Chest Pain Center accreditation standards. Remote Ischemic Conditioning (RIC), an emerging non-invasive procedure proven to reduce myocardial injury from heart attack is introduced, along with a suggested protocol for its application. RIC can be implemented by EMS personnel while enroute to a hospital or in the emergency department prior to cardiac catheterization. When used as an emergency bedside reference, the book cover features a 12 Lead ECG divided into five color-coded anatomic regions of the heart. Arrows lead from each anatomic region and point to the page number where information specific to each type of STEMI can be found. The information provided advises the clinician of the coronary artery that is most likely occluded, specific complications to anticipate and special considerations that should be observed based on correlations of abnormal ST patterns with common coronary artery anatomy as described in multiple evidence-based publications.

A groundbreaking introduction to vectors, matrices, and least squares for engineering applications, offering a wealth of practical examples.

Williams syndrome is a rare neurodevelopmental disorder caused by a genetic abnormality. It has played an important role in helping us understand the nature and course of cognitive development, and in particular, the relationship between genes, the brain, and the environment during development (providing evidence for the idea that the interaction between all three is important). For this reason, the editors of Neurodevelopmental Disorders Across the Lifespan use this syndrome as a model disorder to consider cognitive development. The book brings together leading scientists from the fields of psychology, neuroscience, and genetics to present the latest evidence on development across the lifespan across multiple levels of description (genetic, brain, cognitive, environmental) within a cognitive neuroscience perspective.
