A Brookings Institution Press and the National University of Singapore Press publication This is the story of the Singapore healthcare system: how it works, how it is financed, its history, where it is going, and what lessons it may hold for national health systems around the world. Singapore ranks sixth in the world in healthcare outcomes, yet spends proportionally less on healthcare than any other high-income country. This is the first book to set out a comprehensive system-level description of healthcare in Singapore, with a view to understanding what can be learned from its unique system design and development path. The lessons from Singapore will be of interest to those currently planning the future of healthcare in emerging economies, as well as those engaged in the urgent debates on healthcare in the wealthier countries faced with serious long-term challenges in healthcare financing. Policymakers, legislators, public health officials responsible for healthcare systems planning, finance and operations, as well as those working on healthcare issues in universities and think tanks should understand how the Singapore system works to achieve affordable excellence.

Activity Analysis is an essential skill to occupational therapy. Students and practitioners need not only an understanding of what activity analysis is and how to break down the steps of a task, but also understand how each aspect of an activity influences participation in occupations. Occupation-Based Activity Analysis is a definitive text that effectively progresses the reader toward understanding the differences between occupations and activities, and the interaction of all of the components of activities and occupations, such as performance skills, client factors, activity demands, and contexts. Occupation-Based Activity Analysis by Heather Thomas instructs students to analyze activities using the domain components as outlined in the Occupational Therapy Practice Framework: Domain and Process, 2nd Edition. This timely text guides the reader through understanding the process of activity analysis from the perspective of examining typical activity demands. Learning of key concepts is reinforced through case examples, worksheets, exercises, and sample analyses. Beginning with defining the domain of practice through the areas of occupation, students will learn to identify occupations and activities, while learning to understand the importance of analysis to their domain of practice. Students and practitioners will also discover how to analyze the demands inherent to the activity itself, and the context which surround the activity and the people engaged in it. The component steps to analyzing activities or occupations are uncovered in separate chapters, each aspect reinforces concepts that are foundational to occupational therapy practice. A Glance at What Is Covered: • Activity versus occupation versus tasks • Areas of occupation defined • Details of how social and space demands, as well as objects influence performance • Client factors and body functions and structures defined as they relate to performance in occupations • The influence of the client's contexts • Performance patterns and how their influence on occupations • How to grade and adapt an activity Instructors in educational settings can visit www.efacultyounge.com for additional material to be used for teaching in the classroom.
