Educational Psychology in social context: Ecosystemic applications in southern Africa is a tried-and-tested textbook which applies educational psychology - and, specifically, a unifying ecosystemic framework - to aid teachers and other educators to enhance the learning experience of students in a developing society.

Educational Psychology in social context: Ecosystemic applications in southern Africa is a tried-and-tested textbook which applies educational psychology and, specifically, a unifying ecosystemic framework to aid teachers and other educators to enhance the learning experience of students in a developing society.

Focuses on improving quality of education in South Africa by showing how educators can address contextual disadvantages, social and interpersonal problems, and individual difficulties within wider developmental changes.

"Educational Psychology in social context: Ecosystemic applications in southern Africa is a tried-and-tested textbook which applies educational psychology and, specifically, a unifying ecosystemic framework to aid teachers and other educators to enhance the learning experience of students in a developing society."--Publisher's description.

More a learning instrument than a textbook, this thoroughly updated third edition of Educational Psychology in Social Context addresses specific educational psychology issues pertinent to the developing world by deconstructing and applying theoretical perspectives in their particular social contexts. Educational Psychology in Social Context, third edition, is indispensable for undergraduate and postgraduate students of psychology and education, and a valuable resource for pre-service and in-service teachers.

Educational Psychology in Context: Readings for Future Teachers takes an exciting new approach to educational psychology by addressing the questions that real teachers in real schools ask about real students. This book's purpose is to provide a stimulating alternative to traditional texts by helping teachers develop a strong theoretical and research-based understanding of how their students learn and develop. Unlike other texts, this book of major readings is an anthology of primary-source readings selected for students entering the teaching profession and for teachers interested in examining learning and development.

Technologies and Health raises important and sometimes troubling questions about the role of technology and its relation to health. Using the notion of critical compromise as an organising framework, the potential benefits and detriments of a broad range of health technologies are debated.

In recent years there has been increased recognition of the weaknesses within orthodox views of psychology, and this has led to a surge in critical approaches to the discipline. Reflecting this trend, "Psychology in Social Context: Issues and Debates" provides an accessible introduction to current thinking and key ideas relating to the field of critical psychology. Taking a distinctive approach to addressing issues in psychology, this thought-provoking text considers a variety of historical controversies in psychology and the ways in which the discipline is embedded within particular socio-historical contexts. The team of authors draws on historical analysis to reveal the ways in which psychology interrelates with social context. Concepts are richly illustrated with many examples of how the discipline has engaged with such controversial social issues as race and IQ, psychology and gender, ethical issues in psychology, parapsychology, and the nature-nurture debate. Provocative and intellectually stimulating, "Psychology in Social Context" provides deep insights into the diverse nature of a discipline and its pursuit of the understanding of the mind and behaviour.

This innovative volume integrates social identity theory with research on teaching and education to shed new and fruitful light on a variety of different pedagogical concerns and practices. It brings together researchers at the cutting edge of new developments with a wealth of teaching and research experience. The work in this volume will have a significant impact in two main ways. First and foremost, the social identity approach that is applied will provide the theoretical and empirical platform for the development of new and creative forms of

Download Ebook Educational Psychology In Social Context Ecosystemic Applications In Southern Africa Educational Ps

practice in educational settings. Just as the application of this theory has made significant contributions in organisational and health settings, a similar benefit will accrue for conceptual and practical developments related to learners and educators – from small learning groups to larger institutional settings – and in the development of professional identities that reach beyond the classroom. The chapters demonstrate the potential of applying social identity theory to education and will stimulate increased research activity and interest in this domain. By focusing on self, social identity and education, this volume investigates with unprecedented clarity the social and psychological processes by which learners' personal and social self-concepts shape and enhance learning and teaching. *Self and Social Identity in Educational Contexts* will appeal to advanced students and researchers in education, psychology and social identity theory. It will also be of immense value to educational leaders and practitioners, particularly at tertiary level.

Based on twenty years of research on the social regulation of academic performances, this book offers theoretical and empirical arguments in favour of the inclusion of the social dimension of human beings as essential for their cognitive activities. We all engage in social interactions, compare ourselves with other people, belong to social groups, and are the object of a myriad of categorisations. Not only do such social experiences affect cognition, but they actually determine its form and its content. Several experiments indeed reveal that cognitive performance depends on the relationship between the individual and the social context in which cognition takes place. And this relationship is not forged directly by features of the situation, but rather by personal construals of these features (most notably social comparison). This fact alone justifies granting the individual's social experiences a psychological status and it further strengthens the key idea of this book, namely that the social context only exists through the intervention of cognitive processes of contextualization (producing a "cognitive context of the self") such as those involved in autobiographical memory. A "social psychology of cognition" is suggested, in which the fashionable distinction between cognition and social cognition makes no sense. From this innovative perspective it is indeed more the social nature of the individual rather than that of the object to be processed that defines the social nature of cognition. Well-known phenomena such as social facilitation and social loafing as well as established educational practices are also re-examined from this perspective.
