The European Pharmacopoeia is a major regional pharmacopoeia which provides common quality standards throughout the pharmaceutical industry in Europe to control the quality of medicines, and the substances used to manufacture them. It is a published collection of monographs which describe both the individual and general quality standards for ingredients, dosage forms, and methods of analysis for medicines. These standards apply to medicines for both human and veterinary use.

European Pharmacopoeia - Wikipedia

Get more out of the British Pharmacopoeia with the free "How to use the BP" guide. Get the 'How to use the BP' guide. Need a subscription? To access the BP publication content you need to log in. If you do not have a subscription, find out about the options available to you.

The European Pharmacopoeia is a unique reference for 25 European Countries and the Commission of the European Union. All the pharmaceutical dosage forms and 282 general methods of analysis are described.

In the absence of substitutes, the use of blood components remains essential in therapy. This guide contains a compendium of measures designed to ensure the safety, efficacy and quality of blood components and is particularly intended for all those working in blood transfusion services. In accordance with the approach recommended by the Council of Europe in this field, it is based on the premise of voluntary, non-remunerated blood donation. It describes the different blood components and gives information on their clinical indications and possible side effects.

Describes popular types of tattoos, risks involved in getting one, and costs and approaches to removing one.

Radioactive drug development is a multi-disciplinary task. Therefore, dedicated scientists and experts from different fields of specialisation have contributed to this book. The text reviews forty years of advances in radiopharmaceutical development based on Technetium. The first section reviews basic principles and analytic methods, and information on chemical makeup of radiopharmaceuticals. Part 2 reviews  $^{99m}\text{Tc}$ -radiopharmaceuticals used in nuclear medicine, thoroughly outlining their chemistry, formulation, pharmacokinetics and clinical applications.

The 8th Edition will consist of two initial volumes (8.0) and 8 non-cumulative supplements (8.1 to 8.8). Each volume contains a complete table of contents and index. Volume 1 and 2 combined contain 2224 monographs, 345 general chapters illustrated with diagrams or chromatograms and 2500 descriptions of reagents. Printed with a hardback cover, for use in a laboratory or manufacturing environment.
