Keeping up with new developments in vocational psychology is important to both psychological practitioners and researchers. This volume is devoted to presenting and evaluating important advances in the field of career decision making, development, and maturity. More specifically, it identifies, reports, and evaluates significant contemporary developments in vocational psychology and provides both professional workers and students with an informed understanding of the progress taking place in the field. The history and theory of the assessment of career development and decision making are explored as well as advances in career planning systems. An expanded context for the study and evaluation of career development variables is also described.

This study investigated the factors that influence students' choice of career in secondary school. Questionnaire was used to obtain data. The sample consisted of 100 students from four schools in Ijebu Ode local Government area of Ogun State, Nigeria. Data collected was analyzed using person moment correlation co-efficient. This was used purposely to test the relationship that exist between the variables. The findings revealed that factors such as family background, peer group pressure, societal valued jobs and the school environment directly influence students' choice of career. By counseling implication, secondary school students need adequate guidance from their parents and school counselors to avail them the chance of making the right career choice.

Engineering skills and knowledge are foundational to technological innovation and development that drive long-term economic growth and help solve societal challenges. Therefore, to ensure national competitiveness and quality of life it is important to understand and to continuously adapt and improve the educational and career pathways of engineers in the United States. To gather this understanding it is necessary to study the people with the engineering skills and knowledge as well as the evolving system of institutions, policies, markets, people, and other resources that together prepare, deploy, and replenish the nation's engineering workforce. This report explores the characteristics and career choices of engineering graduates, particularly those with a BS or MS degree, who constitute the vast majority of degreed engineers, as well as the characteristics of those with non-engineering degrees who are employed as engineers in the United States. It provides insight into their educational and career pathways and related decision making, the forces that influence their decisions, and the implications for major elements of engineering education-to-workforce pathways.
