Foc 29th Edition Sprinkler Rules - v1.dors.bespokify.com

For over 120 years the LPC Rules for Automatic Sprinkler Installations (and its forerunner the FOC Sprinkler Rules) have specified sprinkler protection worldwide. We ensure that the rules are up-to-date by keeping abreast of new hazards, technologies, design methods, installations and maintenance requirements.

Newnes Building Services Pocket Book is a unique compendium of essential data, techniques and procedures, best practice, and underpinning knowledge. This makes it an essential tool for engineers involved in the design and day-to-day running of mechanical services in buildings, and a valuable reference for managers, students and engineers in related fields. This pocket reference gives the reader access to the knowledge and knowhow of the team of professional engineers who wrote the sixteen chapters that cover all aspects of mechanical building services. Topic coverage includes heating systems, ventilation, air conditioning, refrigeration, fans, ductwork, pipework and plumbing, drainage, and fire protection. The result is a comprehensive guide covering the selection of HVAC systems, and the design process from initial drafts through to implementation. The second edition builds on the success of this popular guide with references to UK and EU legislation fully updated throughout, and coverage fully in line with the latest CIBSE guides.

This is a third edition of a reference work originally written by George Underdown. The book has been revised by Ron Hirst, who has also added new material, including chapters on combustion technology, automatic systems, the protection of special hazards, and the evaluation of risk. Although essentially a practical work, the theoretical material should widen the application of the book by making the fire engineer aware of the wide range of fire and explosion hazards. At the same time it should provide a basic understanding of the techniques and equipment by which these risks can be mitigated.

Design techniques and strategies for each of the key issues in fire engineering are covered and include procedural framework of legislation, fire science, fire communications, human behaviour in fire, means of escape, fire containment and smoke control. The final chapter provides a useful review of relevant legislation, standards and codes of practice as well as sources of information.
