A review of the original French edition of this book in the American Journal of Sociology hailed it as "the most finished product yet to emerge from the new (Marxist) school of French urban sociology... The aim of the book is nothing less than to reconceptualize the field of urban sociology. It is carried out in two stages: a critique of the literature of urban sociology (and urbanization) and an attempt to lay the Marxist bases for a reconstructed urban sociology." The problems facing the world's cities, whether problems of development or of decay, cannot be solved until they have been diagnosed. The race riots in Detroit, the shantytowns of Paris, the financial crisis of New York must not be seen in isolation. The mushrooming cities of the third world, demolition and urban sprawl at home are located in a network of economics, social welfare and power politics, and the decisions we are called upon to make elude us in a fog of ideology. This brilliant exposition of the function of the city in social, economic and symbolic terms illuminates the creation and structuring of space by action administrative, productive and more immediately human. The interaction of environment and life-style, the complex of market forces and state policy against a background of traditional social practice is scrutinized with the aim of establishing concepts and research methods that will enable us to come to grips with the cities themselves and the way in which we view them. Castells draws on urban renewal in Paris, the English New Towns, the American megalopolis for concrete data in his empirical and theoretical investigation. In this English edition, a new Part V has been added on urban development in America. The chapters on the pobladores in Chile and the struggle of the FRAP in Quebec have been greatly extended and an Afterword traces the development of research in the past five years. -- Amazon.com.

Invertebrate Tissue Culture, Volume II presents the organ cultures of various invertebrates. This book discusses the use of cell and organ cultures in genetics, physiology, and pathology. Organized into three parts encompassing 11 chapters, this volume begins with an overview of the factors necessary for the normal development of embryonic or imaginal rudiments. This text then examines the organ culture technique, which is a means of studying the correlations that may exist between various organs as they can be made to act on one another in the same medium independently of any other factor. Other

chapters consider a detailed analysis of the utilization of organ culture in pathology. This book discusses as well the three major successive aspects of mollusk organ cultures. The final chapter provides information on cell lines from 35 species of insects from various orders and from one species of mollusk. This book is a valuable resource for biologists, pathologists, and physiologists.

Discusses why Americans with low incomes are not the sole or even the primary beneficiaries of the federal housing programs, and estimates the value of benefits received from homeownership and rental assistance, subsidized loans from Farmers Home Administration.

A book with sixteen folk puppet plays based on tales and legends from around the world.
