2012 Assessment Report - Pages

Q3a Given $1 + 3 + 2z + 2z^2 = 0$ where $z = 1 + i\sqrt{3}$ is a root of the equation $z^3 - z^2 - 2z - 12 = 0$ which has real coefficients, $\therefore z = 1 - i\sqrt{3}$ is also a root. Since $(z - (1 + i\sqrt{3}))(z - (1 - i\sqrt{3}))(z - \alpha) = z^3 - z^2 - 2z - 12$ where $\alpha = 1 + i\sqrt{3}$ and $\beta = 1 - i\sqrt{3}$ and α is the third root, $\therefore \alpha\beta = 12$, $(1 + i\sqrt{3})(1 - i\sqrt{3})\alpha = 12$, \therefore

cross-multiply to eliminate the denominators, and then solve for x : $4x$
 $3(3x - 15) = 4x + 9x - 45$ $5x = 45$ $x = 9$ 2. (G)
Since P is on the x -axis, we know its y -value must equal 0. Use that in the equation to solve for x : $y = 15x - 45 = 0$
 $15x - 45 = 0$ $15x = 45$ $x = 3$
