Deeply rooted in Chinese history and adapted widely in various Asian language systems, modern Han characters are principally pictograms, phonograms, or compounds of these units. While conventional typefaces and Chinese calligraphy are still extensively used in daily communication, many young designers are committed to recreating these age-old logograms, combining bold graphics with the merits of traditions to let them speak beyond the original words. With excellent examples from China, Japan, Singapore, Korea and other locations, HANZI HANJA KANJI reviews the contemporary craft of Han characters in different cultures. This showcase includes a variety of published and experimental work, custom-made for branding and identity campaigns and editorial use.

This third edition of Paul Murrell's classic book on using R for graphics represents a major update, with a complete overhaul in focus and scope. It focuses primarily on the two core graphics packages in R - graphics and grid - and has a new section on integrating graphics. This section includes three new chapters: importing external images in to R; integrating the graphics and grid systems; and advanced SVG graphics. The emphasis in this third edition is on having the ability to produce detailed and customised graphics in a wide variety of formats, on being able to share and reuse those graphics, and on being able to integrate graphics from multiple systems. This book is aimed at all levels of R users. For people who are new to R, this book provides an overview of the graphics facilities, which is useful for understanding what to expect from R's graphics functions and how to modify or add to the output they produce. For intermediate-level R users, this book provides all of the information necessary to perform sophisticated customizations of plots produced in R. For advanced R users, this book contains vital information for producing coherent, reusable, and extensible graphics functions.
