CMH Publication 70-30. Edited by Frank N. Schubert and TheresaL. Kraus. Discusses the United States Army's role in the Persian Gulf War from August 1990 to February 1991. Shows the various strands that came together to produce the army of the 1990s and how that army in turn performed under fire and in the glare of world attention. Retains a sense of immediacy in its approach. Contains maps which were carefully researched and compiled as original documents in their own right. Includes an index.

Built at Livorno in 1910, the 10,000-ton RHNS Averof had the distinction of being the flagship, and by far the biggest warship, of the Royal Hellenic Navy until 1951. More than a century after its construction, she is still afloat, one of just three armoured cruisers still in existence in the world. Originally intended for the Italian navy, the ship was bought by Greece and soon saw her first action in the Balkan Wars. In the Battle of Cape Helles (3 Dec 1912) Averof inflicted heavy casualties on the Turkish fleet, following it up with a victory in the Battle of Lemnos (5 Jan 1913). In the 1920s the ship underwent a major refit in France, which included modernizing her armament by replacing her obsolete torpedo tubes with more anti-aircraft guns. When the Germans overran Greece in World War Two, Averof made a dramatic escape to Alexandria, dodging attacks by the Luftwaffe, despite Admiralty orders that she be scuttled. In 1941 she escorted a convoy to India, being the first Greek vessel to enter Indian waters since the time of Alexander the Great, and continued to serve on escort duties throughout the war. In 1945 Averof was laid up on the island of Poros and neglected until 1984 when the Greek Admiralty decided to resurrect the ship. After years of slow refitting and preservation, the ship is now moored at Phaleron on the coast of Athens as a floating naval museum. As well as giving full technical specifications and operational history, including details of her restoration, John Carr draws on first-hand accounts of the officers and men to relate the long and remarkable career of this fine ship.

This book examines the nature and consequences of strategic competition between the US and China, which affects the global security landscape and the emerging security architecture across the broader Asia-Pacific region. The author illustrates the evolution of Sino-US security interactions from the anti-Soviet alliance, to temporary marginalization, to eventual strategic competition and examines cases that could potentially escalate into greater conflicts. The analysis offers tantalizing glimpses into both the dangers and promising opportunities presented by this strategic fork in the road, making it of great interest to researchers and scholars in the fields of international relations and security studies.

To assist the Army in its reorientation toward conventional combat operations, the authors of this report identify capability gaps in the field artillery and actions that the Army should consider taking from today to roughly 2030.

Over the last few years, interest in the industrial applications of AI and learning systems has surged. This book covers the recent developments and provides a broad perspective of the key challenges that characterize the field of Industry 4.0 with a focus on applications of AI. The target audience for this book includes engineers involved in automation system design, operational planning, and decision support. Computer science practitioners and industrial automation platform developers will also benefit from the timely and accurate information provided in this work. The book is organized into two main sections comprising 12 chapters overall: •Digital Platforms and Learning Systems •Industrial Applications of AI

This new work defines national security strategy, its objectives, the problems it confronts, and the influences that constrain and facilitate its development and implementation in a post-Cold War, post-9/11 environment. The authors note that making and implementing national strategy centers on risk management and present a model for assessing strategic risks and the process for allocating limited resources to reduce them. The major threats facing the United States now come from its unique status as "the sole remaining superpower" against which no nation-state or other entity can hope to compete through conventional means. The alternative is what is now called asymmetrical or fourth generation warfare. Drew and Snow discuss all these factors in detail and bring them together by examining the continuing problems of making strategy in a changed and changing world. Originally published in 2006.
