This running test for
injection control pressure
(ICP) is a good test to run
since these specs determine
the fuel injection
operation. This is the DT
MaxxForce which requires 870
psi of ICP to run while the
maximum can go as high as
4500 psi.

The ICP system is a mechanical hydraulic system, electronically controlled by the ECM. The ECM controls the IPR valve while monitoring the ICP sensor to provide the engine with the desired starting and operating pressures. The ICP system drives the high-pressure fuel spray through the injectors. System Component Location

The injector control pressure sensor detects the pressure of the fuel feeding the injectors, and sends that signal to the computer so that it can make the adjustments for optimum performance and efficiency. When there is an issue with this sensor, the signal can be compromised, which can lead to performance issues with the vehicle. 1.
