Intelligent Transportation Systems for Sustainable Development

Intelligent transportation systems play an important role in the sustainable development of the world economy. In the era of autonomous driving, intelligent transportation systems will see disruptive transformation and enable smart mobility.

Online Library Intelligent Transportation Systems

However, their success heavily depends on the construction of dynamic maps, which further relies on precision positioning of both moving and static objects, on the road (2-D positioning) or in the sky (3-D positioning).

For Sustainable
Connected vehicles and fully automated driving systems are the main objectives of the future transportation system. A safe interactive system that interacts with people and things is essential to achieve these objectives. In this context, a crowd intelligence system plays a key role in interactive system development.
