Basic knowledge of European Tax Law This concise handbook has become a traditional instrument for gaining basic knowledge of European tax law with emphasis on direct taxes. It is directed at students, experienced international tax specialists with little knowledge of European law, European law specialists and non-Europeans who deal with Europe for business or academic reasons and need to understand the foundations of European tax law. Moreover, this book can be useful to academics without a legal background in approaching technical issues raised by European Union tax law, as well as give inspiration to the most experienced European direct tax law experts. This sixth edition further refines and updates the content, but also enhances the coordination across the chapter and the selection of case law in line with the weight that it carries for the development of European tax law.

The original contributions to the Research Handbook provide an introduction to the application of Austrian economics to law. The book begins with chapters on the methodology of law and economics. Further chapters discuss key concepts in Austrian economics – dynamic competitive processes, spontaneous order, subjective value, entrepreneurship, and the limited nature of individual knowledge – as they relate to topics in evolutionary law (social rules, self-governance, dispute resolution) and basic law (torts, antitrust, civil procedure, business and family law).

The Law of Double Taxation Conventions Cross-border activities or transactions may trigger tax liability in two or more jurisdictions. In order to mitigate the financial burden resulting from these situations, States have entered into numerous double taxation conventions, which provide for rules that allocate the taxing rights between the contracting states. This handbook aims at providing an introduction to the law of double taxation conventions. It is designed for students – irrespective of their national background, but the author believes that it will also be of great help for tax experts who wish to know more about double taxation conventions, as well as for international law experts who wish to understand more about tax law. The handbook does not consider one jurisdiction in particular but rather takes examples from a wide range of different countries and their jurisdictions. It includes an overview of the problem of double taxation, the state practice in the conclusion of double tax conventions and their effects, the interpretation of double taxation conventions and treaty abuse. Furthermore, this updated handbook takes new developments into account occurred since the last edition of the book from 2013, in particular also the changes through OECD's BEPS project and the Multilateral
