Winner of the 1983 National Book Award! "...a perfectly marvelous book about the Queen of Sciences, from which one will get a real feeling for what mathematicians do and who they are. The exposition is clear and full of wit and humor..." - The New Yorker (1983 National Book Award edition) Mathematics has been a human activity for thousands of years. Yet only a few people from the vast population of users are professional mathematicians, who create, teach, foster, and apply it in a variety of situations. The authors of this book believe that it should be possible for these professional mathematicians to explain to non-professionals what they do, what they say they are doing, and why the world should support them at it. They also believe that mathematics should be taught to non-mathematics majors in such a way as to instill an appreciation of the power and beauty of mathematics. Many people from around the world have told the authors that they have done precisely that with the first edition and they have encouraged publication of this revised edition complete with exercises for helping students to demonstrate their understanding. This edition of the book should find a new generation of general readers and students who would like to know what mathematics is all about. It will prove invaluable as a course text for a general mathematics appreciation course, one in which the student can combine an appreciation for the esthetics with some satisfying and revealing applications. The text is ideal for 1) a GE course for Liberal Arts students 2) a Capstone course for perspective teachers 3) a writing course for mathematics teachers. A wealth of customizable online course materials for the book can be obtained from Elena Anne Marchisotto (elena.marchisotto@csun.edu) upon request.

O filósofo Raymond Duval desenvolveu diversos estudos relativos à Psicologia Cognitiva no Instituto de Pesquisa em Educação Matemática (IPEM) de Estrasburgo, na França. Tomando por base seu trabalho 'Sémiosis et pensée humaine', essa obra discute sua teoria dos registros de representação, instrumento de pesquisa no estudo da aprendizagem de matemática. Na perspectiva de Duval, uma análise do conhecimento matemático é uma análise do sistema de produção de suas representações semióticas. Para ele, a maneira matemática de raciocinar e de visualizar está ligada à utilização das representações semióticas, e toda comunicação em matemática se estabelece com base nelas. Esse livro apresenta algumas pesquisas de brasileiros com a finalidade de divulgar e de compartilhar essa teoria com os leitores.

This compact, well-written history covers major mathematical ideas and techniques from the ancient Near East to 20th-century computer theory, surveying the works of Archimedes, Pascal, Gauss, Hilbert, and many others. "The author's ability as a first-class historian as well as an able mathematician has enabled him to produce a work which is unquestionably one of the best." — Nature.

Mathematician Ian Stewart tells readers what he wishes he had known when he was a student. He takes up subjects ranging from the philosophical to the practical-what mathematics is and why it ' s worth doing, the relationship between logic and proof, the role of beauty in mathematical thinking, the future of mathematics, how to deal with the peculiarities of the mathematical community, and many others.

Leonard Mlodinow's The Drunkard's Walk: How Randomness Rules Our Lives is an exhilarating, eye-opening guide to understanding our random world. Randomness and uncertainty surround everything we do. So why are we so bad at understanding them? The same tools that help us understand the random paths of molecules can be applied to the randomness that governs so many aspects of our everyday lives, from winning the lottery to road safety, and reveals the truth about the success of sporting heroes and film stars, and even how to make sense of a blood test. The Drunkard's Walk reveals the psychological illusions that prevent us understanding everything from stock-picking to wine-tasting - read it, or risk becoming another victim of chance. 'A wonderfully readable guide to how the mathematical laws of randomness affect our lives' Stephen Hawking, author of A Brief History of Time

In this simple non-fiction report we are introduced to the various creatures in a typical pond: frogs, snails, dragonflies, pond-skaters, fish and birds. Each spread features a high quality photograph of the creature on the left, and artwork of pupils and their teacher studying the animals in their natural habitat on the right. •Pink B/ Band 1B books offer emergent readers simple, predictable text with familiar objects and actions. • Text type - A simple non-fiction report. • All of the creatures are repeated in a single labelled diagram of the pond on pages 14 and 15 giving children the opportunity to recount the information. • This information book is paired with a story on the same theme: Fly Away Home by Shoo Rayner. • This book has been levelled for Reading Recovery

In this major new work, Thompson develops an original account of ideology and relates it to the analysis of culture and mass communication in modern Societies. Thompson offers a concise and critical appraisal of major contributions to the theory of ideology, from Marx and Mannheim, to Horkheimer, Adorno and Habermas. He argues that these thinkers - and social and political theorists more generally - have failed to deal adequately with the nature of mass communication and its role in the modern world. In order to overcome this deficiency, Thompson undertakes a wide-ranging analysis of the development of mass communication, outlining a distinctive social theory of the mass media and their impact.
