Many countries around the world are engaged in decentralization processes, and most African countries face serious problems with forest governance, from benefits sharing to illegality and sustainable forest management. This book summarizes experiences to date on the extent and nature of decentralization and its outcomes - most of which suggest an underperformance of governance reforms - and explores the viability of different governance instruments in the context of weak governance and expanding commercial pressures over forests. Findings are grouped into two thematic areas: decentralization, livelihoods and sustainable forest management; and international trade, finance and forest sector governance reforms. The authors examine diverse forces shaping the forest sector, including the theory and practice of decentralization, usurpation of authority, corruption and illegality, inequitable patterns of benefits capture and expansion of international trade in timber and carbon credits, and discuss related outcomes on livelihoods, forest condition and equity. The book builds on earlier volumes exploring different dimensions of decentralization and perspectives from other world regions, and distills dimensions of forest governance that are both unique to Africa and representative of broader global patterns. The authors ground their analysis in relevant theory while drawing out implications of their findings for policy and practice.

Designing Architecture is an indispensable tool to assist both students and young architects in formulating an idea, transforming it into a building, and making effective design decisions. This book promotes integrative and critical thinking in the preliminary design of buildings to inspire creativity, innovation, and design excellence. This compendium of individual wisdom and collective experience offers explicit guidance to students and young professionals on how to approach, analyze, and execute specific tasks; develop and refine a process to facilitate the best possible design projects; and create meaningful architectural form. Here the design process - from orchestrating client participation to finalizing schematic design - is explored and illuminated. The following material is presented to make the book a useful didactic tool for professional development: explicit strategies for doing design rather than simply reviewing principles and precedents creative ideas in approaching and framing problems in design terms specific methods to translate ideas to culturally significant, socially responsive, and environmentally sensitive buildings techniques to integrate all levels of cognition from analysis to epiphany counsel on developing a personalized process for engaging design projects case studies augment the text and chronicle fascinating applications of the design process. The essence of this book lies in an integrated and holistic approach to each unique project as well as fostering curiosity and exploration - a departure from algorithms, easy generalities, or a formula for design. Designing Architecture will inspire readers to elevate the quality of preliminary designs and unravel some of the mystery of creating the most beautiful, responsive, and responsible architectural design possible.

For more than thirty years, the architectural research department at Colonial Williamsburg has engaged in comprehensive study of early buildings, landscapes, and social history in the Chesapeake region. Its painstaking work has transformed our understanding of building practices in the colonial and early national periods and thereby greatly enriched the experience of visiting historic sites. In this beautifully illustrated volume, a team of historians, curators, and conservators draw on their far-reaching knowledge of historic structures in Virginia and Maryland to illuminate the formation, development, and spread of one of the hallmark building traditions in American architecture. The essays describe how building design, hardware, wall coverings, furniture, and even paint colors telegraphed social signals about the status of builders and owners and choreographed social interactions among everyone who lived or worked in gentry houses, modest farmsteads, and slave quarters. The analyses of materials, finishes, and carpentry work will fascinate old-house buffs, preservationists, and historians alike. The lavish color photography is a delight to behold, and the detailed catalogues of architectural elements provide a reliable guide to the form, style, and chronology of the region's distinctive historic architecture.

Paul P.W. Achola and Vijayan K. Pillai address factors associated with wastage in primary school education and the solutions to ameliorate low participation in primary education. The book provides an examination of the factors associated with wastage, exploring the interconnectedness of non-enrollment, repetition and dropout. The authors demonstrate that reducing poverty through empowerment programs and citizen participation in school decisions are critical to improving primary school participation.
