"Mind the gap" is an audible or visual warning phrase issued to rail passengers to take caution while crossing the horizontal, and in some cases vertical, spatial gap between the train door and the station platform. The phrase was first introduced in 1968 on the London Underground in the United Kingdom. It is today popularly associated with the UK among tourists because of the particularly British word choice.

Higher education needs a new, holistic assessment of global learning. The studies in this edited volume investigate not just student learning, but also faculty experiences, program structures, and pathways that impact global learning. Showcasing recent, multi-institutional research related to global learning, this book expands the context of global learning to show its antecedents and impacts as a part of the larger higher education experience. Chapters look at recent developments such as short-term, off-campus, international study and certificate/medallion programs, as well as blended learning environments and undergraduate research, all in the context of multi-institutional comparisons. Global learning is also situated in a larger university context. Thus, there is a growing need for bridging across disciplinary and administrative silos, silos that are culturally bound within academia. The gaps between these silos matter as students seek to integrate off- and on-campus learning, and it is up to the academy to mind those gaps.

The search for a means to an end to apartheid erupts into conflict between a black township youth and his "old-fashioned" black teacher.

'This book taught me so much about female desire. A must read!' Cherry Healey Did you know that there is an orgasm gap of around 30% between heterosexual couples when they have sex? In *Mind The Gap*, Dr Karen Gurney, a clinical psychologist and certified psychosexologist, explores not just this gap, but the gaps in our knowledge of so much of the most important new science around sex and desire. In this book, you will learn that nearly everything that you've been led to believe about female sexuality isn't actually true. And that, despite what you might think, it is possible to simultaneously feel little to no spontaneous desire and have a happy and mutually satisfying sex life long term. Exploring the mismatch between ideas about sex in our society and what the science tells us, *Mind The Gap* also explains how this disconnect lies at the root of many of our sexual problems. Combining science with case studies, practical exercises and tips, this is a book for anyone who wants to better understand the mechanics of desire and futureproof their sex life, for life.

"Stephen Kumalo, a church minister, receives a letter that changes his life. He must leave his village and travel to the city of Johannesburg, where his sister is ill and his son is lost. He has never been so far from home, and he is worried about what he will find there - but the situation is much worse than the could have imagined." - back cover.

Do you want to understand Jesus of Nazareth, his apostles, and the rise of early Christianity? Reading the Old Testament is not enough, writes Matthias Henze in this slender volume aimed at the student of the Bible. To understand the Jews of the Second Temple period, it ' s essential to read what they wrote—and what Jesus and his followers might have read—beyond the Hebrew scriptures. Henze introduces the four-century gap between the Old and New Testaments and some of the writings produced during this period (different Old Testaments, the Apocrypha and Pseudepigrapha, the Dead Sea Scrolls); discusses how these texts have been read from the Reformation

to the present, emphasizing the importance of the discovery of Qumran; guides the student's encounter with select texts from each collection; and then introduces key ideas found in specific New Testament texts that simply can't be understood without these early Jewish "intertestamental" writings—the Messiah, angels and demons, the law, and the resurrection of the dead. Finally, he discusses the role of these writings in the "parting of the ways" between Judaism and Christianity. Mind the Gap broadens curious students' perspectives on early Judaism and early Christianity and welcomes them to deeper study.

From best-selling author Holly Webb comes a brand new series full of mystery and intrigue following the adventures of a very determined heroine and her dog! Holly Webb fans will be thrilled to pieces to discover the adventures of Maisie Hitchins, the pluckiest little detective in Victorian London. Maisie Hitchins lives in her grandmother's boarding house, longing for adventure. She idolizes the famous detective, Gilbert Carrington, and follows his every case. But Maisie is about to be given the opportunity of a lifetime: her own mystery to solve! In the first book in this fantastic new series, Maisie rescues a puppy in peril whilst running an errand, and adopts him. She decides to investigate the puppy's original cruel owner, but instead gets tangled up in an intriguing plot involving stolen sausages, pilfered halfpennies and a fast-paced bicycle chase. The streets of Victorian London are never safe, but Maisie's on the case!

Over the past twenty to thirty years, evaluation has become increasingly important to the field of public policy. The number of people involved and specializing in evaluation has also increased markedly. Evidence of this trend can be found in the International Atlas of Evaluation, the establishment of new journals and evaluation societies, and the increase in systems of evaluation. Increasingly, the main reference point has become an assessment of the merit and value of interventions as such rather than the evaluator's disciplinary background. This growing importance of evaluation as an activity has also led to an increasing demand for the type of competencies evaluators should have. Evaluation began as a niche area within the social and behavioral sciences. It subsequently became linked to policy research and analysis, and has, more recently, become trans-disciplinary. This volume demonstrates an association between the evaluation tradition in a particular country or policy field and the nature of the relationship between social and behavioral science research and evaluative practice. This book seeks to offer comprehensive data, which lead to conclusions about patterns that transcend the gap between evaluation and the social scientific disciplines. Mind the Gap has a twofold aim. The first is to highlight and characterize the gap between evaluation practices and debates, and the substantive knowledge debates within the social and behavioral sciences. The second is to show why this gap is problematic for the practice of evaluation, while at the same time illustrating possible ways to build bridges. The book is centered on the value of producing useful evaluations grounded in social science theory and research.

Inequality kills. Both rich and poor die younger in countries with the greatest inequalities in income. Countries such as the United States with big gaps between rich and poor have higher death rates than those with smaller gaps such as Sweden and Japan. Why? In this provocative book, Richard Wilkinson provides a novel Darwinian approach to the question. Wilkinson points out that inequality is new to our

species: in our two-million-year history, human societies became hierarchical only about ten thousand years ago. Because our minds and bodies are adapted to a more egalitarian life, today's hierarchical structures may be considered unnatural. To people at the bottom of the heap, the world seems hostile and the stress is harmful. If you are not in control, you're at risk. This is a penetrating analysis of patterns of health and disease that has implications for social policy. Wilkinson concludes that rather than relying on more police, prisons, social workers, or doctors, we must tackle the corrosive social effects of income differences in our society.

We rarely speak or even write in the complete sentences that are often held to be the ideal form of linguistic communication. Language is, in fact, full of gaps, because speakers and writers operate in contexts which allow bits of language to be understood rather than expressed. This book systematically analyses this inherent gappiness of language, known as ellipsis, and provides an account of the different contexts, both linguistic and situational, which affect its use. Peter Wilson draws on a wide variety of examples of spoken and written English, and both literary and non-literary to present a comprehensive classification of elliptical language that ranges from the conversational fragment and the advertisement to the dialogue of Shakespeare and imagist poetry. Mind the Gap shows how ellipsis is a feature of major structural and stylistic importance to our understanding of spoken and written language, and will be of interest to undergraduate students of linguistics, literature, communication and the interrelations between them..
