...

I guess you are going to have to start up a 737, shut down manually, save the flight and make it the default flight (after shutting down completely). Restart FS2004. You should be in a cold and dark cockpit situation. From there open the PMDG cold and dark flight. Make THAT flight the default. Restart FS2004. Done. Hope this helps. Regards, Goran

## **Tutorial: Boeing 737 NG Cold & Dark Startup + FMC ...**

In the PMDG NGXu I have set the startup panel state to be cold and dark just like

# Acces PDF Pmdg Cold And Dark Start Checklist

in the original FSX model however if I then load the default panel state in the FMC everything in the plane changes to a ready to fly state except the engines are not running.

## **Cold and Dark to Engines on panel states - PMDG 737NGX**

...

Before start procedure prepares the plane for start and flight. The crew finishes setting FMC (pilot flying will set his CDU to TAKEOFF REF page and pilot monitoring will set it to LEGS page), HDG (or Track) and the first altitude should be entered in MCP at this stage.
