We evaluated effectiveness of personal protective measures against severe acute respiratory disease coronavirus 2 (SARS-CoV-2) infection. Our case-control study included 211 cases of coronavirus disease (COVID-19) and 839 controls in Thailand. Cases were defined as asymptomatic contacts of COVID-19 patients who later tested positive for SARS-CoV-2; controls were asymptomatic contacts who never ...

Respiratory Disease A Case Study Approach To Patient Care

Cloth masks have been used in healthcare and community settings to protect the wearer from respiratory infections. The use of cloth masks during the coronavirus disease (COVID-19) pandemic is under debate. The filtration effectiveness of cloth masks is generally lower than that of medical masks and respirators; however, cloth masks may provide some protection if well designed and used correctly.

Cardiovascular and respiratory disease. Cardiovascular and respiratory diseases are the leading causes of premature death worldwide; in the UK alone, 1 in 4 of us will die from heart disease and 1 in 5 from lung disease. Half of all deaths from heart disease are sudden and unexpected. In this theme, we will focus on how we can:

learning to understand the assessment and treatment of patients with respiratory disease. Each chapter begins with a background of selected disorders, followed by a case study with questions and answers designed to stimulate critical thinking skills. - Each chapter covers etiology, pathophysiology, clinical features, and treatment - New and updated case studies maintain a unique interactive approach and simulate reality by guiding the reader through assessment and treatment Questions the therapist should be asking are strategically placed throughout the case study, followed by possible answers - New pedagogical aids reinforce comprehension and include chapter objectives, bulleted chapter summaries, and sidebars designed to call out key points and assist the reader in focusing on important issues - New appendices detail the standards of care for COPD, TB, and asthma - Reformatted case studies, now with answers along page margin that can be covered by FREE fact-filled bookmark, allow students to progress at their own pace - Useful for preparing for the NBRC clinical simulation examinations

People are increasingly concerned about potential environmental health hazards and often ask their physicians questions such as: "Is the tap water safe to drink?" "Is it safe to live near power lines?" Unfortunately, physicians often lack the information and training related to environmental health risks needed to answer such questions. This book discusses six competency based learning objectives for all medical school students, discusses the relevance of environmental health to specific courses and clerkships, and demonstrates how to integrate environmental health into the curriculum through published case studies, some of which are included in one of the book's three appendices. Also included is a guide on where to obtain additional information for treatment, referral, and follow-up for diseases with possible environmental and/or occupational origins.

Learn to assess and treat respiratory care disorders! Now in full color, Clinical Manifestations and Assessment of Respiratory Disease, 6th Edition bridges normal physiology and pathophysiology to provide a solid foundation in recognizing and assessing conditions. Authors Terry Des Jardins and George G. Burton describe how to systematically gather clinical data, formulate an assessment, make an objective evaluation, identify the desired outcome, and design a safe and effective treatment plan, while documenting each step along the way. Unique coverage of Therapist-Driven Protocols (TDPs) prepares you to implement industry-approved standards of care. Unique! Clinical scenarios connect to specific diseases so you can better understand the disease and the treatment modalities used. Unique! A focus on

Download Ebook Respiratory Disease A Case Study Approach To Patient Care Rar

assessment and Therapist-Driven Protocols (TDPs) emphasizes industry-approved standards of care, providing you with the knowledge and skills to implement these protocols into patient care. Case studies help in applying information to assessment and treatment. Overview boxes summarize the clinical manifestations caused by the pathophysiologic mechanisms of each disorder. End-of-chapter questions include multiple-choice, short answer, matching, and case studies to test knowledge and understanding, pointing out areas that might require further study. A glossary of key terms with definitions is included in the back of the book. Appendices offer easy access to information such as calculations, symbols, medications, and measurements, plus answers to selected case studies. A unique full-color design enhances content and shows realistic examples of diseases and conditions. Student-friendly features reinforce learning with chapter outlines, objectives, and key terms. A consistent presentation of disease information shows background, treatment, and assessment for each condition so you learn the material in a clear, cohesive manner. Over 15 additional case studies with answers are added to the companion Evolve website.

This review workbook is written specifically to accompany *Respiratory Disease: A Case Study Approach to Patient Care*. It is full of questions and answers to help students master assessment and treatment of patients with respiratory disease.

Focusing on assessment through therapist-driven protocols, this valuable tool provides an overview of the assessment process and fundamentals needed for success. It offers discussion of the top five treatment protocols: oxygen, hyperinflation, bronchial hygiene and bronchodilator therapies, as well as mechanical ventilation. Using a case study approach, students learn to manage an entire case from beginning to end. Each time they assess the patient, they use the SOAP format: Subjective, Objective, Assessment, and Plan reasoning, giving them practice in documenting history and developing care plans.

Focusing on therapist-driven protocols, *Respiratory Care Case Studies* presents 29 realistic case studies that take the reader from patient presentation through case "resolution". It employs a formula approach to patient assessment that emphasizes SOAP: Subjective, Objective, Assessment, and Plan reasoning.
