Gives a brief overview of regional issues and the history of education in South Africa and describes the development of education in the country over the past 15 years. It presents an analysis of the education system, identifying key directions for ...

While South Africa has made significant improvements in basic and tertiary education enrollment, the country still suffers from significant challenges in the quality of educational achievement by almost any international metric. The paper finds that money is clearly not the main issue since the South Africa ' s education budget is comparable to OECD countries as a percent of GDP and exceeds that of most peer sub-Saharan African countries in per capita terms. The main explanatory factors are complex and multifaceted, and are associated with insufficient subject knowledge of some teachers, history, race, language, geographic location, and socio-economic status. Low educational achievement contributes to low productivity growth, and high levels of poverty, unemployment, and inequality. Drawing on the literature, the paper sketches some policy considerations to guide the debate on what works and what does not.

The past ten years in South Africa has seen many changes in education - the creation of a single department of education; common examinations for all learners in public schools in the country, a new outcomes based education curriculum

which was introduced to learners in the general education and training phase since 1998 and will be introduced to the further education and training phase from 2006. To evaluate the success of these changes South African researchers still use the indicator of student achievement. The matriculation examination is the visible, high profile and public performance indicator. Every year parents, learners, teachers, researchers, government officials, policymakers, and the general public get involved in the debate around the matric examination with the most frequently asked questions being - Did the pass rate go up? Are standards dropping? Are the results real or have they been manipulated? How is our education system doing? Are we meeting the development goals? What should the matriculation examination of the future look like? participants from government (national and provincial),

The book is the result of a five-year project that culminated (within the first three years) in doctoral research interrogating language competency for meaningful mathematics instruction at upper primary level conducted at University of Stellenbosch in 2017; and this book in the succeeding two years. The initial research project received countrywide coverage in several South African media outlets including Times Live and Radio 2000.

South Africa has done well to systematically expand its educational system and to lengthen the schooling experience of successive learner cohorts. But the quality of the output from the school system has been questioned. In seeking to identify the reasons for this, it is important to relate educational outputs (competencies, as measured for instance by examinations or standardized tests) to inputs. Determining the relative contributions of the inputs - of the school, the household and the individual learner - to educational outputs is not straightforward, particularly since very little educational production function analysis has been undertaken in South Africa. Until recently, no South African school data has incorporated test results, school characteristics and information on the household circumstances of individual learners necessary for this kind of analysis. However, the results from a survey of a sample of schools involved in the large-scale Quality Learning Project (QLP), funded by the Business Trust, have yielded such data. The QLP data set offers a new analytical opportunity to address the question: What are the effects of social and economic variables on educational outcomes in the QLP schools?

A systematic review of research projects into the state of education in South Africa.

Economic and social changes, fast evolution of technology, and the growing importance of Internet services and international communications--all these require secondary education providers to adapt what is taught and learned in schools. However, in Africa the content of secondary curricula is in most cases ill-adapted to 21st century challenges, where young people are mobile, have access to 'more and instant information,' and face health threats such as HIV/AIDS. In addition, implementation problems exist, and the time for instruction is often much less than what is required by the prescribed secondary curriculum. In Africa there is a need to develop a secondary education curriculum adapted to the local economic and social environment, but with international-comparable performance indicators. This study analyzes that challenge: the quality of curricula and assessment, and their development processes in secondary education in Africa against the background of existing contexts, conditions, and ambitions on the one hand and current pedagogical thinking on the other. This World Bank Working Paper was prepared as part of the Secondary Education and Training in Africa (SEIA) initiative which aims to assist countries to develop sustainable strategies for expansion and quality improvements in secondary education and training.

OECD's 2013 Economic Survey of South Africa examines recent economic developments, policies and prospects. Special chapters cover improving education quality and green growth.

Informative and mind-opening, this text uniquely provides a comprehensive overview of a range of non-western approaches to educational thought and practice. Its premise is that understanding the ways that other people educate their children--as well as what counts for them as "education"--may help readers to think more clearly about some of their own assumptions and values, and to become more open to alternative viewpoints about important educational matters. The approach is deliberately and profoundly pedagogical, based in the author's own teaching practice. Designed to be used in pre-service and in-service teacher education courses where substantial critical discussion and debate are encouraged, the text is enhanced by Questions for Discussion and Reflection in each chapter. Updates and Features of the Fourth Edition - NEW! Chapter 2 exploring key features of the 'western educational tradition', and information about the contemporary educational systems in different countries - NEW! Chapter 10 on traditional educational thought and practice in Oceania, with special focus on the Maori in New Zealand, the Hawai'ians, and the Australian Aboriginal peoples - Updated chapter on Africa includes fuller explanation of the diversity within the indigenous African experience, as well as several contemporary cases of state education in Africa - Updated Chapter 4 is designed to help non-Muslims to understand the Muslim educational heritage and the growing issue of Islamophobia - Exploration of Chinese education now includes a special emphasis on the thought of Confucius, the role of the imperial examination system, and the impact of political and economic changes in the 20th century - Updated analysis of contemporary educational practices in Hindu and Buddhist educational thought and practice and brief discussions of Jainism and Sikhism
