Rising to Power is a time tested, wisdom-packed guide for executives desiring to be exceptional leaders as they navigate their ascent to the highest levels of their organization. Nearly two-thirds of all leaders entering executive roles lack sufficient understanding of what is required and are unprepared for what they will face, which explains why 50 percent of them fail within the first eighteen months. For decades we have known that failure rates among transitioning executives are too high, causing exorbitant costs, damaged organizations, and stalled careers. Still, little has changed in the way organizations prepare leaders to assume executive positions. Three-fourths of new executives say their organization did not adequately prepare them for the executive office. It doesn't have to be this way. If you are an executive—or you're aspiring to be one—and considering how you will navigate the ascent in your organization, Rising to Power will serve you like no other resource can. Odds are high you have watched a promising executive fail on their way up. Like many, you scratched your head, wondering, "Why didn't they see that coming?" Now

you're hoping not to be the next one that falls. *Rising to Power* will guide you on a predictable journey of ascent, through the transitional moments and issues most common in executive failure. It will bolster your confidence, open your eyes, deepen your insight, and if you let it, reveal your own proclivities for failure that you may not even recognize. Based on a ten-year longitudinal study, *Rising to Power* offers a profoundly new way of looking at an executive's rise in an organization, and offers an approach to significantly increase your odds of success.

This newly revised and expanded edition of the 2003 Artech House classic, *Radio Frequency Integrated Circuit Design*, serves as an up-to-date, practical reference for complete RFIC know-how. The second edition includes numerous updates, including greater coverage of CMOS PA design, RFIC design with on-chip components, and more worked examples with simulation results. By emphasizing working designs, this book practically transports you into the authors' own RFIC lab so you can fully understand the function of each design detailed in this book. Among the RFIC designs examined are RF integrated LC-based filters, VCO automatic amplitude control loops, and fully integrated transformer-based circuits, as well as image reject mixers and power amplifiers. If you are new to RFIC design, you can benefit from the introduction to basic theory so you can quickly come up to speed on how RFICs perform and work together in a communications device. A thorough examination of RFIC technology guides you in knowing when RFICs are the right choice for designing a communication device. This leading-edge resource is packed with

over 1,000 equations and more than 435 illustrations that support key topics."

This book is an anthology of critical reviews in business management which is taught in both levels, the undergraduate and the graduate level courses. Throughout the book Dr. Milad intended to tackle the crucial concepts that his management students have touched. Additionally, Dr. Milad followed closely the APA formatting, but occasionally, he was not restricted by its rules.

Following *Conversations on Religion* (Continuum 2008), here is a fascinating line up of original interviews tackling one of today's most vexing issues - that of truth. These discussions explore the question of what truth is, and what role it has in private, public, political and scientific discourses. Some thinkers, see truth as something concrete and immutable, others believe that it is an essentially meaningless concept. And for many contributors it is the practical application of truth which engages them. Each fascinating chapter explores the subject from a new angle, including Nick Davies and Peter Wilby's view on truth in the media, Prof. Martin Kusch's reflections in relation to science and Mary Warnock's consideration of truth in the context of ethics and art. Other contributors include Mary Midgely, Noam Chomsky and A. C. Grayling. This is a book of quite exceptional interest and importance.

The aim of this book is to help students write mathematics better. Throughout it are large exercise sets well-integrated with the text and varying

appropriately from easy to hard. Basic issues are treated, and attention is given to small issues like not placing a mathematical symbol directly after a punctuation mark. And it provides many examples of what students should think and what they should write and how these two are often not the same.
