To do this, fly towards the upwind side of the thermal by straightening up slightly each time your 360 pattern faces you into the wind. Once you reach the upwind edge of the thermal, you'll often feel an increase in lift as you encounter the

The answer is to use the tighten-on-the-surge technique : when you feel the thermal pushing solidly, or the vario indicates the

File Type PDF Thermal Flying

strongest lift, you should tighten the turn and dig the wing into the thermal. Most pilots don't turn tightly enough, but of course, if you only tighten up in lift you'll end up in a spiral dive !

File Type PDF

Thermal Flying

As I'm climbing in a thermal I'll have a target cruise speed in mind for when I leave.

Say I'm flying a Laminar ST on a typical XC day with 2 m/s climbs, let's say my target speed is 35 mph. However, it's horribly inefficient to accelerate in sink, so pull in the bar as you roll out of the thermal

File Type PDF

Thermal Flying

and dive to your
target cruise speed.

The British

Association of Radio
Control Soarers was

founded back in the
early 1970s. BARCS
has also developed
over these years a
considerable voice in
protecting and
promoting its
interests, such that it
is the specialist body
for soaring as

File Type PDF

Thermal Flying

Recognised by the
BMFA and now has a
considerable
presence within that
parent UK body. It
also has a place
around the table in
regular discussions ...

~~BARCS – The British
Association of Radio
Control Soarers~~

The objective of this
article is to discuss

File Type PDF

Thermal Flying

attitude and approach to improving thermal flying skills, not so much technical details covered in many other sources. It is about breaking down the elements and practicing smaller parts before trying to perfect everything at once. Hopefully I can offer a couple of tips that have helped me.

File Type PDF
Thermal Flying
The How 39 S
~~The Path to
Improvement in
Thermal Soaring~~

And Why's By
Bill Forrey Jr 39
Summer
This effect is caused
by the differing
transmission
characteristics for
radiation of differing
wavelengths; thermal
energy can become
trapped within the
cockpit. The
temperatures in

File Type PDF Thermal Flying

cockpits of aircraft
parked on airfield
ramps may be 50 to
60 degrees

Fahrenheit higher
than those in hangars
because of the
radiation of solar
heating through
transparent surfaces.

~~temperature extremes
and flying~~

For successful

File Type PDF Thermal Flying

Thermal soaring, the day needs to be warm and without too much wind, and you should be flying in an open, flat area. Thermals are of course invisible, but a strong heat haze rising from a surface, or circling birds, can indicate the presence of thermals.
