approach was taboo as brands thought themselves trendier, instead of aligning with the seemingly uncool industries.

8 Current Trends in Food Packaging Industry - Hit News Center

The recent advancements are seen in the field of food packaging technologies such as modified atmosphere packaging, active packaging, smart or responsive packaging systems, etc. which has revolutionized the field of food packaging and contributed tremendously in the enhancement of shelf-life of the array of food products.

Trends and Opportunity in Food Packaging Industry: An ...

Trends in food packaging vary depending on the food product category, or if the packaging is for foodservice (delis, takeout etc). The overall trend in food packaging encompasses two goals: reduce impact to the environment while still differentiating a brand and food purchasing experience through packaging innovation.

Packaging plays an essential role in protecting and extending the shelf life of a wide range of foods, beverages and other fast-moving consumer goods. There have been many key developments in packaging materials and technologies in recent years, and Trends in packaging of food, beverages and other fast-moving consumer goods (FMCG) provides a concise review of these developments and international market trends. Beginning with a concise introduction to the present status and trends in innovations in packaging for food, beverages and other fast-moving consumer goods, the book goes on to consider modified atmosphere packaging and other active packaging systems, including smart and intelligent packaging, and the role these play in augmenting and securing the consumer brand experience. Developments in plastic and bioplastic materials and recycling systems are then discussed, followed by innovations and trends in metal, paper and paperboard packaging. Further chapters review international environmental and sustainability regulatory and legislative frameworks, before the use of nanotechnology, smart and interactive packaging developments for enhanced communication at the packaging/user interface are explored. Finally, the book concludes by considering potential future trends in materials and technologies across the international packaging market. With its distinguished editor and international team of expert contributors, Trends in packaging of food, beverages and other fast-moving consumer goods (FMCG) is an important reference tool, providing a practical overview of emerging packaging technologies and market trends for research and design professionals in the food and packaging industry, and academics working in this area. Introduces the present status, current trends and new innovations in the field whilst considering future trends in materials and technologies Considers modified atmosphere packaging and other active packaging systems including smart and intelligent packaging Discusses developments in plastic and bioplastic materials and recycling systems

Towards more sustainable packaging with biodegradable materials! The combination of the continuously increasing food packaging waste with the non-biodegradable nature of the plastic materials that have a big slice of the packaging market makes it necessary to move towards sustainable packaging for the benefit of the environment and human health. Sustainable packaging is the type of packaging that can provide

File Type PDF Trends In Packaging Of Food Beverages And Other Fast Moving Consumer Goods Fmcg Markets Materials And Technologies Woodhead Publishing Series In Food Science

to food the necessary protection conditions, but at the same time is biodegradable and can be disposed as organic waste to the landfills in order to biodegrade through a natural procedure. In this way, sustainable packaging becomes part of the circular economy. ?Sustainable Food Packaging Technology? deals with packaging solutions that use engineered biopolymers or biocomposites that have suitable physicochemical properties for food contact and protection and originate both from renewable or non-renewable resources, but in both cases are compostable or edible. Modified paper and cardboard with increased protective properties towards food while keeping their compostability are presented as well. The book also covers natural components that can make the packaging functional, e.g., by providing active protection to the food indicating food spoilage. * Addresses urgent problems: food packaging creates a lot of hard-to-recycle waste - this book puts forward more sustainable solutions using biodegradable materials * State-of-the-art: ?Sustainable Food Packaging Technology? provides knowledge on new developments in functional packaging * From lab to large-scale applications: expert authors report on the technology aspects of sustainable packaging

The primary objective of food packaging is to contain and protect foodstuffs from physical, chemical and mostly microbiological spoilage. At the same time food packaging serves as a powerful marketing tool attracting the consumer with features such as easy opening and handling, information on the nutrient and caloric content of the contained product, instructions on the preparation and use of the package contents etc. It is difficult to imagine modern society without packaged goods. The authors/contributors of this book volume come from a variety of different backgrounds and are well respected each one in their own field of research. Their contributions have made the objective of the book possible. Professionals such as food scientists, packaging technologists and engineers as well as students engaging in food packaging and seeking to update their knowledge will find the contents of this book useful.

Food Packaging: Innovations and Shelf-life covers recently investigated developments in food packaging and their influence in food quality preservation, shelf-life extension, and simulation techniques. Additionally, the book discusses the environmental impact and sustainable solutions of food packaging. This book is divided into seven chapters, written by worldwide experts. The book is an ideal reference source for university students, food engineers and researchers from R&D laboratories working in the area of food science and technology. Professionals from institutions related to food packaging.

This book describes the basic principles of food packaging, as well as recent advances in new materials. The Japanese are world leaders in this area, and detailed information on certain aspects of their industry are presented in this volume. Sanitation and waste of food packaging materials Food packaging and energy in Japan New trends in the technology of food preservation Fresh and processed food packaging

Trends in Beverage Packaging, volume 16 in the Science of Beverages series, presents an interdisciplinary approach that provides a complete understanding of packaging theories, technologies and materials. This reference offers a broad perspective regarding current trends in packaging research, quality control techniques, packaging strategies and current concerns in the industry. Consumer demand for

File Type PDF Trends In Packaging Of Food Beverages And Other Fast Moving Consumer Goods Fmcg Markets Materials And Technologies Woodhead Publishing Series In Food Science

bottled and packaged beverages has increased, and the need for scientists and researchers to understand how to analyze quality, safety and control are essential. This is an all-encompassing resource for research and development in this flourishing field that covers everything from sensory and chemical composition, to materials and manufacturing. Includes information on the monitoring of microbial activity using antimicrobial packaging detection of food borne pathogens Presents the most up-to-date information on innovations in smart packaging and sensors for the beverages industry Discusses the uses of natural and unnatural compounds for food safety and good manufacturing practices

Packaging, Eco-Friendly Packaging For Exports, Export Packaging, Corrugated Board, Plastics, Bopp Films, Plastic Woven Sacks, Expanded Polystyrene, FI Exible Packaging, Glass Containers, Aluminium Foil, Adhesive Tapes, Wooden Containers, Systems Packaging, Aseptic Packaging, Vacuum Packaging, Aerosol Packaging, Packaging Of Horticultural Crops, Meat Fish & Poultry, Dairy Products, Biscuits, Bread & Confectionery, Fruit Juices, Ready To Eat Foods, Pharmaceutical Products, Cosmetic, Soaps & Detergents, Fertilizers & Pesticides Industry, Handicrafts For Export, Packaging Of Textiles Etc. And Many More Etc.

Packaging continues to be one of the most important and innovative areas in food processing. Edited by a leading expert in the field, and with its distinguished international team of contributors, Novel food packaging techniques provides an authoritative and comprehensive review of the key trends. Part one discusses the range of active packaging techniques such as the use of oxygen and other scavengers, moisture regulation and antimicrobial packaging in food preservation. It also covers the use of intelligent systems such as time-temperature and freshness indicators to assess food quality. Part two reviews developments in modified atmosphere packaging (MAP) and its role in enhancing product safety and quality. Part three describes packaging applied in practice to particular products such as meat and fish. Part four covers other key issues such as packaging optimisation, the legislative context, sustainable packaging and consumer attitudes. Novel food packaging techniques is a standard reference for the food industry in optimising the use of packaging to improve product safety and quality. Provides an authoritative and comprehensive review of the key trends of food packaging Discusses the range of active packaging techniques such as the use of oxygen and other scavengers, moisture regulation and antimicrobial packaging in food preservation Covers packaging optimisation, the legislative context, sustainable packaging and consumer attitudes

Our intuition on how the world works could well be wrong. We are surprised when new competitors burst on the scene, or businesses protected by large and deep moats find their defenses easily breached, or vast new markets are conjured from nothing. Trend lines resemble saw-tooth mountain ridges. The world not only feels different. The data tell us it is different. Based on years of research by the directors of the McKinsey Global Institute, No Ordinary Disruption: The Four Forces Breaking all the Trends is a timely and important analysis of how we need to reset our intuition as a result of four forces colliding and transforming the global economy: the rise of emerging markets, the accelerating impact of technology on the natural forces of market competition, an aging world population, and accelerating flows of trade, capital and people. Our intuitions formed during a uniquely benign period for the world economy—often termed the Great Moderation. Asset prices were rising, cost of capital was falling, labour and resources were abundant, and generation after generation was growing up more prosperous than their parents. But the Great Moderation has gone. The cost of capital may rise. The price of everything from grain to steel may become more volatile. The world's labor force could shrink. Individuals, particularly those with low job skills, are at risk of growing up

File Type PDF Trends In Packaging Of Food Beverages And Other Fast Moving Consumer Goods Fmcg Markets Materials And Technologies Woodhead Publishing Series In Food Science

poorer than their parents. What sets No Ordinary Disruption apart is depth of analysis combined with lively writing informed by surprising, memorable insights that enable us to quickly grasp the disruptive forces at work. For evidence of the shift to emerging markets, consider the startling fact that, by 2025, a single regional city in China—Tianjin—will have a GDP equal to that of the Sweden, of that, in the decades ahead, half of the world's economic growth will come from 440 cities including Kumasi in Ghana or Santa Carina in Brazil that most executives today would be hard-pressed to locate on a map. What we are now seeing is no ordinary disruption but the new facts of business life— facts that require executives and leaders at all levels to reset their operating assumptions and management intuition.
