in the cause and prognosis of prostate and other cancers. These data indicate that perturbation of vitamin D signaling may be a target for the prevention and treatment of prostate cancer.

*Vitamin D in prostate cancer - PubMed*

Prostate cancer is the most common cancer in men in the United States. Some scientists think vitamin D may help protect against prostate cancer. Prostate cancer generally occurs in men over the age of 50; however, it is slow growing in most men and takes a lifetime to develop. Prostate cancer has been found in the prostate gland of more than 80 percent of men over the age of 70 who died from an entirely unrelated disease.
