Voice Production in Singing and Speaking, Based on ...

production. The physical production of voice has been explained for a long time by the myoelastic or aerodynamic theory, as follows: when the vocal cords are brought into the closed position of phonation by the adducting muscles, a coordinated expiratory effort sets in. Air in the lungs, compressed by the expiratory effort, is driven upward through the trachea against the undersurface of the vocal cords.

Voice projection is the strength of speaking or singing whereby the voice is used loudly and clearly. It is a technique which can be employed to demand respect and attention, such as when a teacher is talking to the class, or simply to be heard clearly, as an actor in a theatre. Breath technique is essential for proper voice projection.

It is utmost urgent to know how to produce right voice using correct method of breathing of sound production before singer adapt himself/herself to less effe...

Breathing & Voice Production technique - Singing Tutorial ...

A further distinction between singing and speaking is the control that is required, in singing, of the movement and reflexes of the larynx. As one sings higher, the larynx tends to rise sympathetically and at a certain point becomes an interference causing the voice to break, or crack.

Singing | music | Britannica

The human voice frequency is specifically a part of human sound production in which the vocal folds(vocal cords) are the primary sound source. (Other sound production mechanisms produced from the same general area of the body involve the production of unvoiced consonants, clicks, whistlingand whispering.)

Singing has been a characteristic behaviour of humanity across several millennia. Chorus America (2009) estimated that 42.6 million adults and children regularly sing in one of 270,000 choruses in the US, representing more than 1:5 households. Similarly, recent European-based data suggest that more than 37 million adults take part in group singing. The Oxford Handbook of Singing is a landmark text on this topic. It is a comprehensive resource for anyone who wishes to know more about the pluralistic nature of singing. In part, the narrative adopts a lifespan approach, pre-cradle to senescence, to illustrate that singing is a commonplace behaviour which is an essential characteristic of our humanity. In the overall design of the Handbook, the chapter contents have been clustered into eight main sections, embracing fifty-three chapters by seventy-two authors, drawn from across the world, with each chapter illustrating and illuminating a particular aspect of singing. Offering a multi-disciplinary perspective embracing the arts and humanities, physical, social and clinical sciences, the book will be valuable for a broad audience within those fields.

Unlike some other reproductions of classic texts (1) We have not used OCR (Optical Character Recognition), as this leads to bad quality books with introduced typos. (2) In books where there are images such as portraits, maps, sketches etc We have endeavoured to keep the quality of these images, so they represent accurately the original artefact. Although occasionally there may be certain imperfections with these old texts, we feel they deserve to be made available for future generations to enjoy.

The present work is based on a life study of the voice, and has grown out of the conviction that all teaching and learning in voice-culture, whether for the purposes of singing or speaking, should as far as possible rest on a scientific foundation.
