Evoqua Water Technologies Gas Feeders
and accessories are designed to control
and indicate the rate of flow of chlorine, to
provide a simple means of manually
setting the feed rate at any value within the
range of the machine, to mix the gas with
water, and to deliver the resultant solution
to the point of application.

MFC analyzer/controller offers a broad combination of drinking water analysis and disinfection/chemical control in a single unit. Up to four water quality parameters, such as free and total chlorine, chlorine dioxide, ozone, fluoride, conductivity, ORP, pH, and temperature can be measured by single or multiple cells.

MFC Analyzer/Controller - Evoqua
Wallace & Tiernan Products and Services.
Our legacy in chlorination began 100 years ago with one of the most significant public health advancements of the millennium - the 1913 installation of the first chlorinator in a public drinking water system. It continues today with the latest in gas chlorination, disinfection and chemical dosing systems and packages.

4 OPERATION The V10k gas feed
system operates under a vacuum that is
produced at the injector and transmitted
through the control unit to the vacuum
regulating valve located at the gas supply.
Gas enters the vacuum regulating valve
and moves toward the flow control
components under a vacuum.
